Time in the Beam Sharing Mode between PT and Irradiation Facilities					Downtime

[#e] = the number of evening shifts BD = Beam Development
 [#n] = the number of night shifts X,TBD = to be determined * To be confirmed.
 #h = the duration of the user time in hours, exclusive beam trimming time

The detailed scheduling within a week is planned 3 weeks in advance.
 With a contradiction between the long-term schedule and the short-term one, the last one prevails.
